Installation

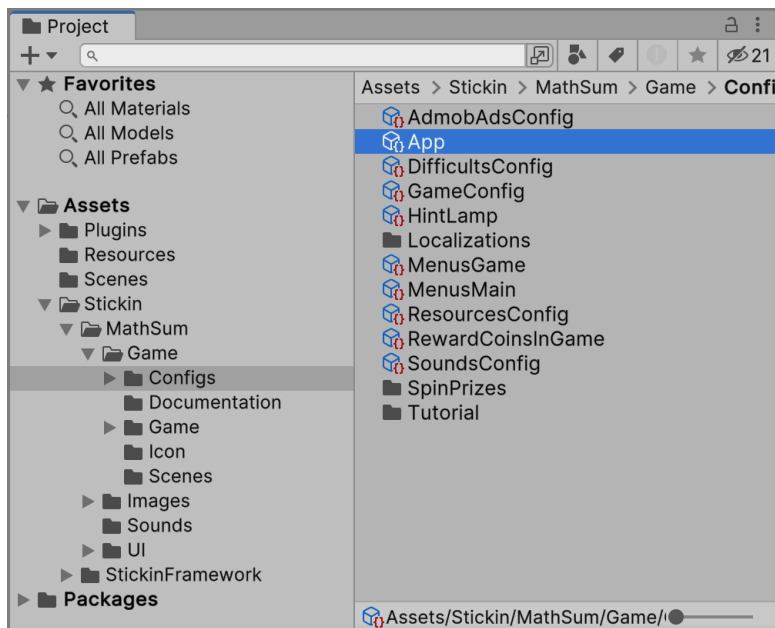

1. Create a new project in Unity 2023.1 or higher
2. Import the game package into the project

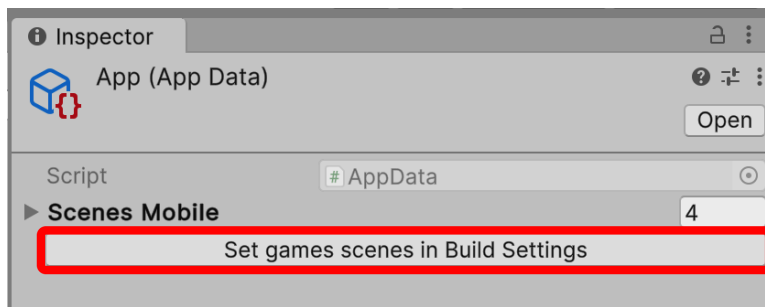

3. Import the package [DoTween](#) or [DoTween Pro](#) из Unity Asset Store

4. Find the “App” file in “Assets/Stickin/{gameName}/Configs”.

5. Select it and click the button "Set games scenes in Build Settings".

6. Launch the game.

Game description

Meet Triple Tile - Match Puzzle - a triple matching puzzle game!

Solve puzzles by connecting tiles and become a real master. Master simple mechanics and addictive gameplay in Triple Tile - Match Puzzle. This game is reminiscent of classic Mahjong and modern graphics, look for matches among the tiles and climb the levels to reach the top.

Play matching Triple Tile - Match Puzzle games. When you play classic matching games for adults, you have to match 3 or more tiles in order to clear them from the playing field.

Beat challenging levels today!

Game Features:

- 900+ levels
- connect tiles in groups of three
- support 12 languages
- hints in the game
- easy reskin games
- Admob advertising support (Banner, Interstitial, Video Reward)
- daily bonuses in the game
- iOS and Android support
- clean and understandable code (MVC pattern)
- find your zen with relaxing levels

- solve complex problems
- use hints if you are stuck
- infinite number of levels
- regular updates with new features

Game Settings

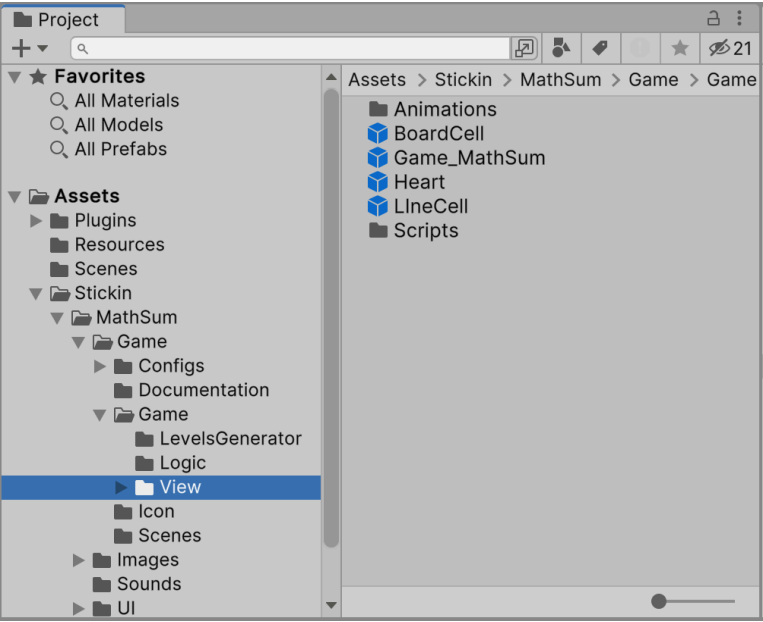

All game settings are located in the Game/Configs folder:

- **GameConfig** - settings for the game itself and gameplay
- **HintLamp** - parameters of the story “Lamp”
- **LocalizationsConfig** - localizations in the game
- **MenusMain** - out-of-game menu list
- **MenusGame** - menu list during the game
- **ResourcesConfig** - available resources in the game. And also the initial value when you first start the game
- **RewardCoinsInGame** - reward for viewing Reward advertising
- **SoundsConfig** - list of all sounds in the game
- **ResourcesPrizesConfig** - prizes in the daily bonus

Reskin

Reskinning a game is easy. In the “Assets/Stickin/{gameName}/Game/Game/View” folder there is a set of prefabs that can be modified to obtain your own type of game.

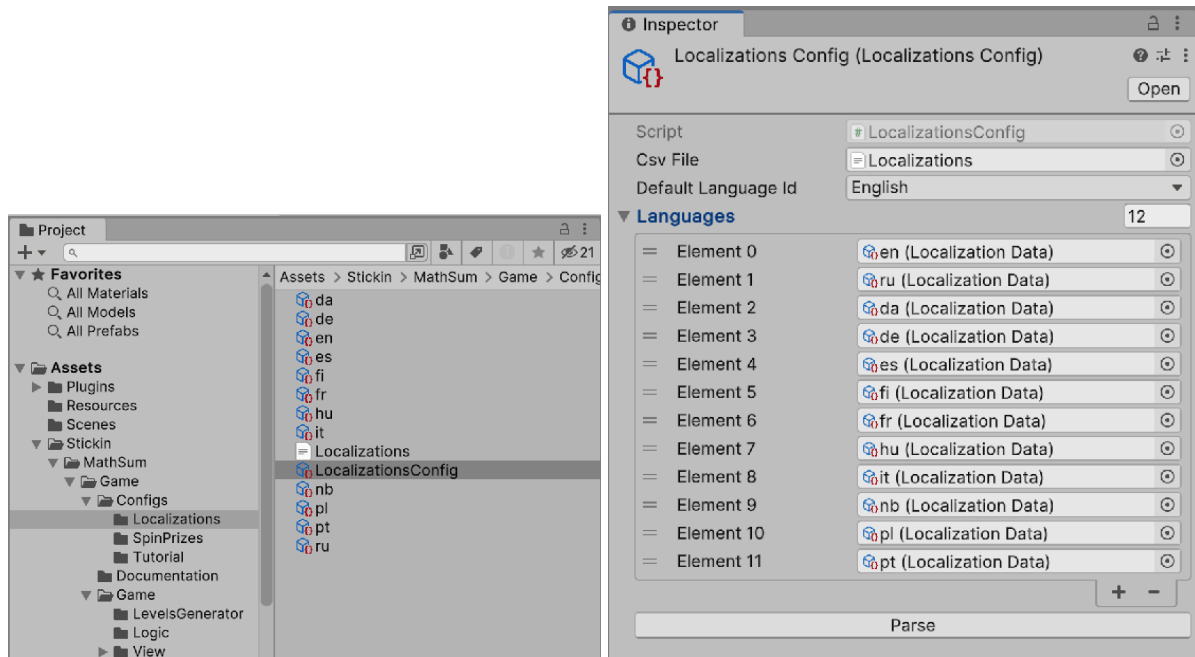

And for the menu, change the prefabs in the “Assets/Stickin/{gameName}/UI” folder.

Localization

The game supports localization.

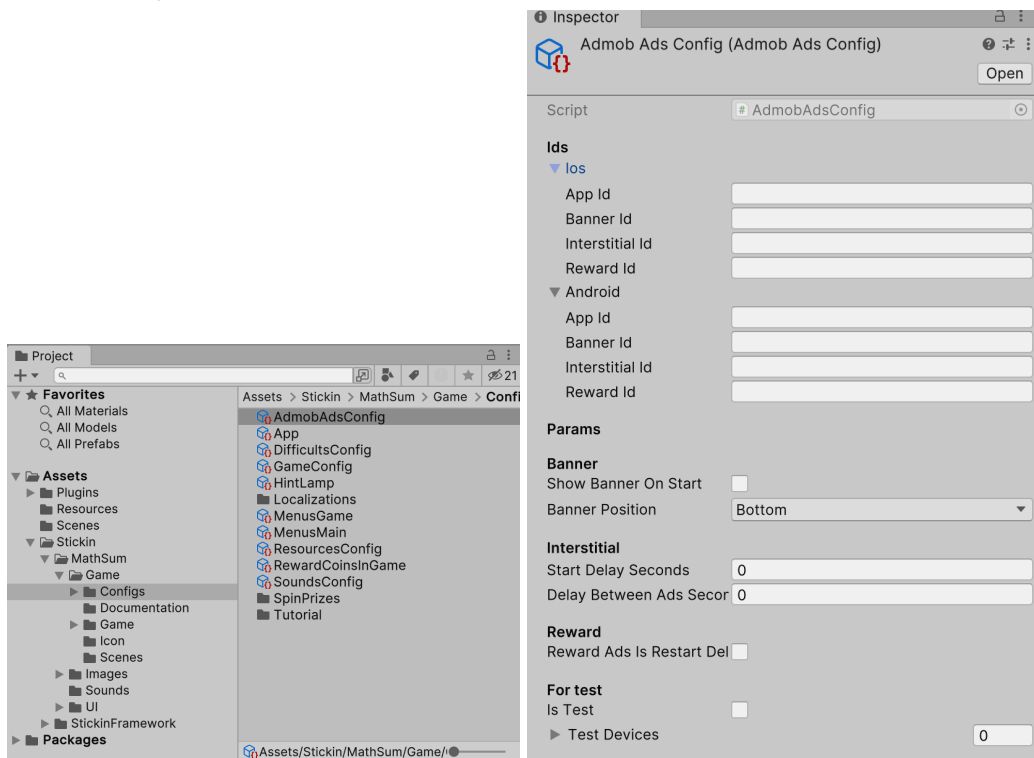

All available localizations are located in the “LocalizationsConfig” file. This config is created automatically from Localizations.csv files which can be edited by adding or removing languages. After editing, you need to select the “LocalizationsConfig” file and click the “Parse” button

Advertising

To set up advertising in the game you need:

- download [Admob SDK](#) add it to the Unity game project
- add Android and iOS apps to AdMob
- add advertising blocks (banner, interstitial, reward) to AdMob
- insert id in the project for Android and iOS
- find the “AdmobAdsConfig” file in the project and insert all the necessary identifiers into it

- Add the ST_ADS key for advertising to work in the code
